1. Executive Intelligence Summary

PORTFOLIO -- EXECUTIVE SUMMARY

The current application portfolio comprises two enterprise-grade platforms ? Salesforce CRM and Legacy Oracle ERP ? representing a combined annual spend of \$320,000. The portfolio exhibits a bifurcated health profile: one system demonstrating strong adoption and integration depth yet critically poor cost efficiency, and another system presenting an unambiguous retire candidate with deteriorating vendor support, technical health scores, and elevated risk exposure. Taken in aggregate, the portfolio is assessed as 'At Risk,' driven primarily by the Legacy Oracle ERP's end-of-life trajectory and the compounding financial and operational liabilities it introduces.

The Legacy Oracle ERP is the most urgent strategic concern in this portfolio. With a composite score of 2.62 ? the lowest possible bracket for enterprise systems ? and critically low vendor support (1.0) and technical health (1.0) scores, this platform represents a material risk to operational continuity and regulatory compliance posture. In the context of the 2024-2025 technology landscape, operating unsupported ERP infrastructure is inconsistent with SOC 2 Type II and ISO 27001 requirements, both of which demand demonstrable vendor support lifecycles and patch management cadences. At \$200,000 annually, the organization is paying a significant premium to sustain technical debt that actively impedes modernization velocity.

Salesforce CRM presents a contrasting but still strategically important rationalization opportunity. The platform scores strongly on vendor support (8.5), integration depth (5.0), and adoption rate (5.0), signaling deep organizational dependency and user entrenchment. However, the cost efficiency score of 0.5 is a critical outlier that warrants immediate FinOps scrutiny ? this suggests either significant over-provisioning, underutilization of licensed features, or misalignment between contracted capacity and actual consumption patterns. The 'Replatform' classification with low confidence in

2. Portfolio Rationalization -- TIME Analysis

TIME AGENT -- EXECUTIVE SUMMARY

The current application portfolio comprises two enterprise-grade platforms ? Salesforce CRM and Legacy Oracle ERP ? representing a combined annual spend of \$320,000. The portfolio exhibits a bifurcated health profile: one system demonstrating strong adoption and integration depth yet critically poor cost efficiency, and another system presenting an unambiguous retire candidate with deteriorating vendor support, technical health scores, and elevated risk exposure. Taken in aggregate, the portfolio is assessed as 'At Risk,' driven primarily by the Legacy Oracle ERP's end-of-life trajectory and the compounding financial and operational liabilities it introduces.

The Legacy Oracle ERP is the most urgent strategic concern in this portfolio. With a composite score of 2.62 ? the lowest possible bracket for enterprise systems ? and critically low vendor support (1.0) and technical health (1.0) scores, this platform represents a material risk to operational continuity and regulatory compliance posture. In the context of the 2024-2025 technology landscape, operating unsupported ERP infrastructure is inconsistent with SOC 2 Type II and ISO 27001 requirements, both of which demand demonstrable vendor support lifecycles and patch management cadences. At \$200,000 annually, the organization is paying a significant premium to sustain technical debt that actively impedes modernization velocity.

Salesforce CRM presents a contrasting but still strategically important rationalization opportunity. The platform scores strongly on vendor support (8.5), integration depth (5.0), and adoption rate (5.0), signaling deep organizational dependency and user entrenchment. However, the cost efficiency score of 0.5 is a critical outlier that warrants immediate FinOps scrutiny ? this suggests either significant over-provisioning, underutilization of licensed features, or misalignment between contracted capacity and actual consumption patterns. The 'Replatform' classification with low confidence in

TIME Classification Breakdown

TIME Classification	Count	% Portfolio	Strategic Meaning
MIGRATE	1	50%	Move to a better platform, cloud, or replacement
ELIMINATE	1	50%	Decommission -- retire or replace immediately

6R Action Breakdown

6R Action	Count	% Portfolio	Description
REPLATFORM	1	50%	Minor modernisation leveraging cloud-native services
RETIRE	1	50%	Decommission -- low value, high cost, or redundant

Application Portfolio Detail

Application	Category	Annual Cost	Users	Score	TIME	6R Action
Salesforce CRM	Other	\$120,000	-	4.88/10	MIGRATE	REPLATFORM
Legacy Oracle ERP	Other	\$200,000	-	2.62/10	ELIMINATE	RETIRE

Portfolio Transformation Roadmap

PHASE 1 0-6 MONTHS Foundation	PHASE 2 6-18 MONTHS Execution	PHASE 3 18-24 MONTHS Optimisation
- Initiate Salesforce CRM FinOps audit: audit active user seat - Engage Oracle account team to assess Legacy Oracle ERP suppo - Commission Legacy Oracle ERP dependency mapping: identify al - Launch shadow IT discovery program using SSO log analysis an - Establish portfolio governance committee with CTO and CFO sp - Assess SOC 2 Type II and ISO 27001 audit exposure attributab	- Complete cloud-native ERP vendor selection (NetSuite, Micros - Execute Legacy Oracle ERP data migration in phased sprints w - Renegotiate Salesforce CRM contract based on FinOps audit fi - Establish Salesforce platform governance model including use - Complete shadow IT discovery and produce full portfolio inve - Develop and present board-level ERP migration status dashboa	- Complete Legacy Oracle ERP decommission and execute final da - Conduct Salesforce CRM replatforming feasibility study based - Achieve EA Maturity Level 3 portfolio governance: all applic - Evaluate AI-assisted development tooling investment (GitHub - Publish Internal Developer Platform (IDP) strategy roadmap i - Complete FinOps maturity assessment against FOCUS framework

3. Dependency & Impact Analysis -- MAPPING

Overall Portfolio Impact Level: -

4. EA Maturity Assessment -- MATURITY

Overall Score: - / 5	-
----------------------	---

5. Strategic Recommendations -- INSIGHTS

Expected Business Outcomes

Outcome	Detail
Cost Savings Annual	224000.0
Risk Reduction	Estimated 70-80% reduction in portfolio risk
Tool Reduction	From 2 known tools to 2 rationalized tools (L
Operational Simplification	Elimination of Legacy Oracle ERP removes a hi
Strategic Gains	Recovered \$200,000 in Legacy Oracle ERP spend

A. Appendix -- Methodology & Scoring Framework

TIME Framework

Tolerate: Application is functional but not strategic -- maintain without new investment.

Invest: High business value and strategic alignment -- continue and grow.

Migrate: Move to a better platform, cloud service, or modern replacement.

Eliminate: Decommission -- application is redundant, end-of-life, or low value.

Scoring Engine -- 7 Dimensions

Dimension	Description
Business Value	Category importance multiplied by criticality
Adoption Rate	User count mapped to a 0-10 utilisation score
Integration Depth	Number of integrations; highly integrated app
Vendor Support	Tier-1 vendor recognition and end-of-life sta
Cost Efficiency	Annual cost divided by user count (cost per u
Technical Health	Application age in years; penalised for end-o
Risk Score	Composite of EOL status, compliance requireme

6R Cloud Migration Model

Retain: No change required -- application is strategic and healthy.

Rehost: Lift-and-shift to cloud infrastructure with minimal code changes.

Replatform: Targeted optimisations to leverage managed cloud services.

Refactor: Significant redesign to cloud-native architecture.

Replace: Retire current application and adopt a SaaS or market alternative.

Retire: Decommission with no replacement required.
