1. Executive Intelligence Summary

PORTFOLIO -- EXECUTIVE SUMMA

The assessed application portfolio encompasses four tools across ERP, CRM, and ITSM categories, representing a combined annual spend of \$435,000. The portfolio exhibits a bifurcated health profile: two legacy systems (Legacy Oracle ERP and Legacy CRM) are operating well below acceptable thresholds for a regulated financial services institution, while two modern SaaS platforms (Salesforce CRM and ServiceNow) demonstrate adequate vendor support and technical health but are underdelivering on cost efficiency and adoption. Taken in aggregate, the portfolio is classified as 'At Risk,' driven primarily by the presence of unsupported legacy infrastructure carrying elevated regulatory exposure under DORA, PCI-DSS, and SOX frameworks effective January 2025.

The Legacy Oracle ERP represents the single most urgent risk in this portfolio. With a vendor support score of 1.0 and a technical health score of 1.0, this system is almost certainly operating on an end-of-life or heavily customised instance without active vendor patches ? a condition that directly contravenes DORA's ICT risk management mandates and BCBS 239 data lineage requirements. Despite a high business value score of 10.0, this dependence without a modern alternative in place constitutes a critical single point of failure. Similarly, the Legacy CRM, though lower in absolute cost at \$20,000 annually, presents comparable technical and vendor support deficiencies and should be decommissioned in coordination with Legacy Oracle ERP retirement to avoid cascading data integrity issues.

Salesforce CRM and ServiceNow both score in the 'TOLERATE' band, reflecting platforms that are strategically sound but operationally under-optimised. The cost efficiency score of 0.5 for both tools signals that the organisation is either significantly over-licensed relative to active user consumption or has not rationalised its subscription tiers against actual adoption ? a common value leakage pattern in financial services firms post-rap

2. Portfolio Rationalization -- TIME Analysis

TIME AGENT -- EXECUTIVE SUMMA

The assessed application portfolio encompasses four tools across ERP, CRM, and ITSM categories, representing a combined annual spend of \$435,000. The portfolio exhibits a bifurcated health profile: two legacy systems (Legacy Oracle ERP and Legacy CRM) are operating well below acceptable thresholds for a regulated financial services institution, while two modern SaaS platforms (Salesforce CRM and ServiceNow) demonstrate adequate vendor support and technical health but are underdelivering on cost efficiency and adoption. Taken in aggregate, the portfolio is classified as 'At Risk,' driven primarily by the presence of unsupported legacy infrastructure carrying elevated regulatory exposure under DORA, PCI-DSS, and SOX frameworks effective January 2025.

The Legacy Oracle ERP represents the single most urgent risk in this portfolio. With a vendor support score of 1.0 and a technical health score of 1.0, this system is almost certainly operating on an end-of-life or heavily customised instance without active vendor patches ? a condition that directly contravenes DORA's ICT risk management mandates and BCBS 239 data lineage requirements. Despite a high business value score of 10.0, this dependence without a modern alternative in place constitutes a critical single point of failure. Similarly, the Legacy CRM, though lower in absolute cost at \$20,000 annually,

presents comparable technical and vendor support deficiencies and should be decommissioned in coordination with Legacy Oracle ERP retirement to avoid cascading data integrity issues.

Salesforce CRM and ServiceNow both score in the 'TOLERATE' band, reflecting platforms that are strategically sound but operationally under-optimised. The cost efficiency score of 0.5 for both tools signals that the organisation is either significantly over-licensed relative to active user consumption or has not rationalised its subscription tiers against actual adoption ? a common value leakage pattern in financial services firms post-rap

TIME Classification Breakdown

TIME Classification	Count	% Portfolio	Strategic Meaning
TOLERATE	2	50%	Functional but not strategic -- maintain, no new investment
ELIMINATE	2	50%	Decommission -- retire or replace immediately

6R Action Breakdown

6R Action	Count	% Portfolio	Description
REPLATFORM	2	50%	Minor modernisation leveraging cloud-native services
RETIRE	2	50%	Decommission -- low value, high cost, or redundant

Application Portfolio Detail

Application	Category	Annual Cost	Users	Score	TIME	6R Action
Legacy Oracle ERP	ERP	\$200,000	-	3.92/10	ELIMINATE	RETIRE
Legacy CRM	CRM	\$20,000	-	3.62/10	ELIMINATE	RETIRE
Salesforce CRM	CRM	\$120,000	-	5.88/10	TOLERATE	REPLATFORM
ServiceNow	ITSM	\$95,000	-	5.5/10	TOLERATE	REPLATFORM

Portfolio Transformation Roadmap

PHASE 1 0-6 MONTHS Foundation	PHASE 2 6-18 MONTHS Execution	PHASE 3 18-24 MONTHS Optimisation
- Launch Legacy Oracle ERP dependency mapping and BCBS 239 dat - Implement DORA compensating controls for Legacy Oracle ERP: - Configure ServiceNow DORA ICT incident management workflows - Initiate user count data collection across all four portfolio - Issue RFP for cloud-native ERP replacement (Oracle Cloud Fin	- Complete Legacy CRM to Salesforce data migration, including - Execute Salesforce license audit and right-sizing negotiatio - Complete ServiceNow license optimisation and integrate with - Establish Technology Governance Committee with quarterly APM - Select ERP replacement vendor and complete proof-of-concept	- Complete Legacy Oracle ERP cutover to cloud-native replaceme - Decommission Legacy Oracle ERP and reclaim \$200,000 annual c - Achieve EA Maturity Level 3 certification through documented - Evaluate Salesforce Financial Services Cloud deep-feature ac - Conduct full portfolio re-scoring with complete user count d

3. Dependency & Impact Analysis -- MAPPING

Overall Portfolio Impact Level: CRITICAL

MAPPING CONTEXT

Analysis covers 2 ELIMINATE-classified applications (Legacy Oracle ERP and Legacy CRM) from a 4-app financial services portfolio governed under a CIO-led TOGAF framework. Both applications are end-of-life and flagged for retirement. The broader portfolio includes Salesforce CRM (TOLERATE) and ServiceNow (ITSM, TOLERATE), which are candidate successor or

co-existing platforms. No integration data, CMDB records, or known dependency mappings were provided, significantly limiting dependency resolution. Analysis is conducted against the financial services industry context, including DORA (effective January 2025), SOX, PCI-DSS, Basel III/IV, BCBS 239, and IFRS 9 compliance obligations. Legacy ERP systems in financial services frequently underpin regulatory reporting, general ledger, and audit trail functions ? all of which carry mandatory replacement certification requirements before elimination.

Per-Application Dependency Analysis

Application	TIME	Impact Level	Coupling	Direct Dependencies
Legacy Oracle ERP	ELIMINATE	CRITICAL	None/10	
Legacy CRM	ELIMINATE	MEDIUM	None/10	

Recommended Migration Sequence

1.
1. Legacy CRM ? retire mid-sequence after Salesforce CRM migration validation and regulated data aud
2.
2. Legacy Oracle ERP ? retire late-sequence only after certified successor ERP is in full production

4. EA Maturity Assessment -- MATURITY

Overall Score: 2.1 / 5	Managed
------------------------	---------

Dimension Scores

Dimension	Score	Key Gaps
Vision And Strategy	2/5	No evidence of a formal EA strategy document
Governance And Organisation	2/5	CIO-led governance without evidence of an Arc
Architecture Development	2/5	TOGAF is cited as the EA framework but no EA
Application Architecture	2/5	50% eliminate rate across a 4-application por
Data Architecture	2/5	No evidence of a canonical data model, master
Technology Architecture	2/5	No declared cloud strategy means infrastructu
Integration And Interoperability	2/5	CRITICAL dependency complexity rating across
Business Value And Innovation	2/5	No EA value measurement framework is evidence

Top Improvement Priorities

- Establish an Architecture Review Board and CMDB immediately to meet DORA ICT asset register and operational re
- Execute an Integration Discovery exercise to map all dependencies before actioning the 2 ELIMINATE decisions ?
- Define a Cloud Strategy and Technology Standards Register to provide a governed target-state architecture four

Maturity Improvement Roadmap

Phase	Key Actions
Phase 1 (0-6 months) ? Foundat	Establish the Architecture Review Board (ARB)
Phase 2 (6-18 months) ? Execut	Execute the 2 ELIMINATE application decommis
Phase 3 (18-24 months) ? Optim	Execute TOLERATE application migration or upg

5. Strategic Recommendations -- INSIGHTS

Expected Business Outcomes

Outcome	Detail
Cost Savings Annual	104000.0
Risk Reduction	Elimination of two critically unsupported leg
Tool Reduction	from 4 to 2 active legacy systems eliminated
Operational Simplification	Elimination of the dual-CRM operating model c
Strategic Gains	Migration to a cloud-native ERP positions the

A. Appendix -- Methodology & Scoring Framework

TIME Framework

- Tolerate: Application is functional but not strategic -- maintain without new investment.
- Invest: High business value and strategic alignment -- continue and grow.
- Migrate: Move to a better platform, cloud service, or modern replacement.
- Eliminate: Decommission -- application is redundant, end-of-life, or low value.

Scoring Engine -- 7 Dimensions

Dimension	Description
Business Value	Category importance multiplied by criticality
Adoption Rate	User count mapped to a 0-10 utilisation score
Integration Depth	Number of integrations; highly integrated app
Vendor Support	Tier-1 vendor recognition and end-of-life sta
Cost Efficiency	Annual cost divided by user count (cost per u
Technical Health	Application age in years; penalised for end-o
Risk Score	Composite of EOL status, compliance requireme

6R Cloud Migration Model

- Retain: No change required -- application is strategic and healthy.
- Rehost: Lift-and-shift to cloud infrastructure with minimal code changes.
- Replatform: Targeted optimisations to leverage managed cloud services.
- Refactor: Significant redesign to cloud-native architecture.
- Replace: Retire current application and adopt a SaaS or market alternative.
- Retire: Decommission with no replacement required.
